

ADDENDUM 02: Wildfire Risk Mapping Project RFP

Reference Number: PS-2025-08

1. Section 3.2.1 (page 10) the term 'integrated risk management approach' - Is there a specific definition for this term? Is it taken from a specific guidance document?

There is no Town of Canmore specific definition. We want to ensure we have an integrated/comprehensive approach that takes perspective from multiple departments/interest holders/data sets/considerations.

2. I wonder about the GIS environment used by the Town of Canmore and how much capacity there is? Does the Town use ESRI ArcGIS Online? ArcGIS Enterprise? Is the hope to make an interactive web map as an outcome of this project?

We have ArcGIS Online as well as an internal ArcGIS Enterprise system. We would be hoping to add any resulting GIS datasets to our interactive web maps. We can provide a contractor editor license for the scope of the project to our ArcGIS Online environment if needed. The Town would also be okay with this becoming a public facing map.

3. Will site visits or field data collection be required for this project? If so, how much?

There is no field data collection required, however, there would be great value in being familiar with the community. There are nuances on the ground that cannot necessarily be discerned from data.

4. Section 3.2.1: Is there any data to identify roof type, age of homes specifically? For individual homes?

Yes, we have roof type data from 2023/24, but do not have a comprehensive building age dataset. The tax assessment data has some age numbers by parcel for about 60% of parcels in the town. Additional data can be collected from Census Canada datasets.
